

During a recent audit, it was discovered that the Metro Water Services Pretreatment Program Ordinance Limits were incorrect for these three parameters. The error was due to an incorrect number being used in the original calculations.

		24 Hour Flow		Maximum
		Proportional*		Instantaneous
		Concentration Limit		Concentration - Grab
		(mg/L) {Daily Maximum		Sample Limit (mg/L)
Molybdenum	existing	1.0		2.0
	corrected	1.4		2.8
Selenium	existing	1.1		2.2
	corrected	1.0		2.0
Total Phthalates	existing	3.92		7.48
	corrected	6.68		13.36

In order to satisfy Federal and State requirements, Metro Water Services must publicize any modification in the Pretreatment Program and provide an opportunity for public comment.

Please email eco@nashville.gov if you have a comment and/or question.
